ANTARES

Fixed subsoiler with V-shaped chassis

The **ANTARES** subsoiler has a very robust construction, to perform a deep work and decompact the soil efficiently and reliably.

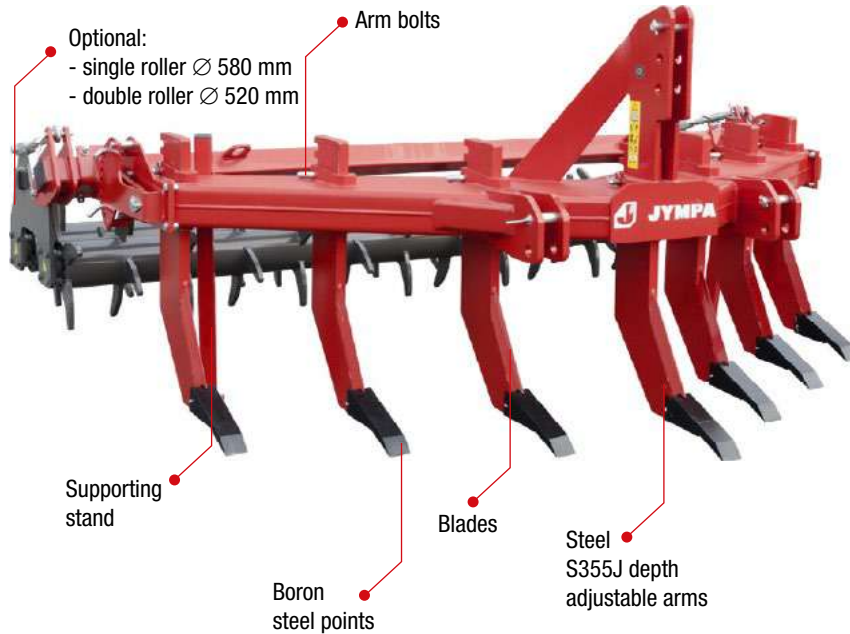

It is the original model with V-shaped chassis developed by JYMPA 50 years ago, pioneer in incorporating the height adjustment of the arms, improved and optimized to better penetrate the ground with the least resistance to advance. The wide range of models and optional equipment covers all the needs.

“Great robustness and resistance”

Model ANTARES-9-SR50-PC with cast steel boots and double roller Ø 520 mm

Accessories

Simple roller Ø 580 mm

Double roller Ø 520 mm

Model ANTARES-7 with double roller Ø 520 mm

Models with **hydraulic folding** also incorporate **non-return valves with flow regulators** and **anti-opening security system**.

Model	Required power HP	Folding	Distribution folded arms	Width without roller m	Width with single roller m	Width with double roller m	Working depth m	Clearance cm	No. arms	Arms section mm	Arms spacing cm	Hitch category	Approximate weight kg
